4. Multiplexers

a) Write a minimized Boolean equation for the function performed by the following circuit. (5 points)

b) Implement the following logic function using a 4-1 multiplexer (5 points)

$Y(A,B,C)=\overline{A} \overline{B} C + B$

Exercise 2.39 Write a minimized Boolean equation for the function performed by the circuit in Figure 2.87.

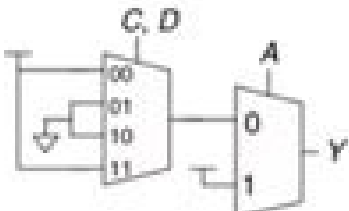

Figure 2.87 Multiplexer circuit

Implement the following boolean function using a 4x1 multiplexer and logic gates. Implement boolean function using 16 1 multiplexer. Implement the three-variable boolean function using a 4-to-1 multiplexer. Implement boolean function using 2 1 multiplexer. Implement the following boolean function using a 4x1 multiplexer. Implement the following boolean function using a 8x1 multiplexer. Implement boolean function using 4 1 multiplexer. Implement boolean function using multiplexer pdf.

Therefore, we connect 1 to 1 line. But according to the question, it should be implemented with Multiplexer 8: 1 MUX.PO 8: 1, there must be 3 selection lines. The block diagram of a multiplexer is shown in the figure below. The is applied to the S1 and B selection line is applied to the S0 selection line. The inputs are applied to the selection lines. As we have variables à à à à
